Training with an eye movement task for months enabled the monkeys to move their eyes to the correct direction where an object was even in the affected side of their visual fields. Masatoshi Yoshida of the National Blind Sight for Physiological Sciences, Japan, provides compelling evidence that blindsight occurs because Blind Sight information is conveyed bypassing the primary visual cortex.

This is an excellent book for those who don't just want to read a Blindsight adventure. Two stars it is. The study was published in the peer-reviewed science journal Current Biology. When people talk about horror in sci-fi, I imagine something pretty cheesy.

Except Robert Kentridge at the University of Durham has evidence to suggest that damage to the primary visual cortex leads to blindness in the part of the visual field that corresponds to the damaged cortical representation.
