In the past, Marxian political economy has tended to give, at best, passing consideration to environmental factors, but historically there have been exceptions to this tendency. Reconceptualizing Socialism Numerous observers have viewed the collapse of Communist regimes in the former Soviet Union and Eastern Europe as an indication that capitalism constitutes the end of history and that socialism was a bankrupt experiment that led to totalitarianism, forced collectivization, gulags, ruthless political purges, and inefficient centralized planned economies. Small-scale organic farming tends to be more fuel efficient than industrial agriculture, which relies heavily on petroleum, chemical fertilizers, and pesticides.

A shift to renewable energy sources—particularly solar, wind, geothermal, envisions three distinct economic sectors: . The reality of climate change has become the driving force behind this global movement for political change.
