Light bodies, such as fire, tended upward to their proper place ; heavy bodies, such as water or earth, tended downward to theirs. For the places of equal solids are always equal; but their suffices, by reason of their dissimilar figures, are often unequal.

Introductionetnotes, LibrairiePhilosophiqueJ.The turnofthe19thand20
And now we might add something concerning a certain most

subtle spirit which pervades and lies hid in all gross bodies; by the Paraphysical Principles of Natural Philosophy and action of which spirit the particles of bodies attract one another at near distances, and cohere, if contiguous; and electric bodies operate to greater distances, as well repelling as attracting the neighbouring corpuscles; and light is emitted, reflected, refracted, inflected, and heats bodies; and all sensation is excited, and the members of animal bodies move at the command of the will, namely, by the vibrations of this spirit, mutually propagated along the solid filaments of the nerves, from the outward organs of sense to the brain, and from the brain into the muscles. Theerman, Paul, and Adele F. Historians of philosophy of science investigate, among other things, Kant's work in the conceptual foundations of physics – in particular, his matter theory e.
