The federal government has a critical role in play in catalyzing new clean-tech innovations, and in helping bring them to market. The first pillar of a carbon dividends plan is a gradually increasing tax on carbon dioxide emissions, to be implemented at the refinery or the first point where fossil fuels enter the economy, meaning the mine, well or port. The concept is simple: a limit or cap is placed on greenhouse gases from certain industries. Such plans come in many varieties, but they typically charge polluting industries for the carbon dioxide they pump into the atmosphere. The people that conserve the most and produced the least amount of carbon emissions will get a bigger dividend than a person who has been producing a large amount of carbon emissions. Americans need to rejoin the rest of the world in formally recognizing the threat of Climate Change.
